

EncoreRC®Tile

EncoreRC Tile is a patented modular backing system consisting of two layers of thermoplastic vinyl composite material, reinforced with fiberglass for optimum stability and performance in a tile. EncoreRC Tile incorporates a layer of 100% recycled material and is in itself entirely recyclable.

For more information about Bentley Prince Street products please call **800.423.4709** Or visit us at www.bentleyprincestreet.com

Why use EncoreRC Tile?

- Contains on average 55% by backing weight total recycled content, 18% of which is post-consumer
- Proven performance and reliability for over 25 years in the commercial flooring market
- Highest performing backing in the industry achieving “Industry Best in Class”
- Excellent roller mobility for ease in movement of people and product
- Imperative for environments where access to the sub-floor is essential

What are the features and benefits of this backing?

Protekt® Soil and Stain Protection

Our patented stain resistant coating, Protekt is applied during the manufacturing process, preserving the carpet's color, while incorporating resistance to stains. Protekt provides a lasting barrier to soiling and staining, which simplifies the cleaning process and enhances the longevity of your carpet.

Non-Woven Primary Backing

The non-woven primary backing provides additional tensile strength and extra dimensional stability while eliminating “threads” at the ends of the tile.

Pre-Coat with Intersept® Antimicrobial

Permanently incorporated into the backing pre-coat, this antimicrobial system inhibits the growth of a broad spectrum of organisms such as molds, fungi, mildews and bacteria. Also protects against stain, odor, and bio-deteriorating microorganisms. Intersept has been proven safe and effective in independent and in-house testing, and its efficacy cited in peer-reviewed journals.

Vinyl Composite and Recycled Vinyl Composite

The foundation of EncoreRC Tile is the two vinyl composite layers in which solid thermoplastic vinyl composite material create optimum stability and performance. The Recycled Vinyl Composite bottom layer is composed of 100% recycled materials.

Fiberglass Reinforcement

Fiberglass reinforced construction lays flat with a 10' adhesive grid so it is completely releasable making it ideal for raised floor applications and occupied space replacement.

We stand behind our product.

2 year materials and workmanship. 20 year moisture penetration, edge ravel, delamination, tuft pulls, excessive surface wear and static discharge.
