

Source Report: **Protekt® with Intersept® Antimicrobial**

Advanced Soil and Stain Protection that Lasts

You can extend the life and performance of your flooring with Protekt®, Bentley Prince Street's patented stain resistant coating. Protekt® uses advanced technology to provide a lasting barrier against permanent soiling and staining, which simplifies the cleaning process and enhances the longevity of your carpet.

Protekt® contains a patented fluorochemical soil-resistance treatment which works by lowering the surface energy of the fibers, and it contributes to the stain resistance properties of Protekt®. Also included is a proprietary stain resist chemistry which seals the polymer to Anionic (Acid based), (Cationic) Basic, and neutral or disperse stainants. Protekt® is actually bound to each fiber, preserving the carpet's color, pattern, hand and texture while incorporating resistance to stains.

Protekt® won't yellow or dull a carpet surface, either. By resisting soiling and stains, Protekt® reduces the need for frequent major cleaning, which keeps maintenance costs down.

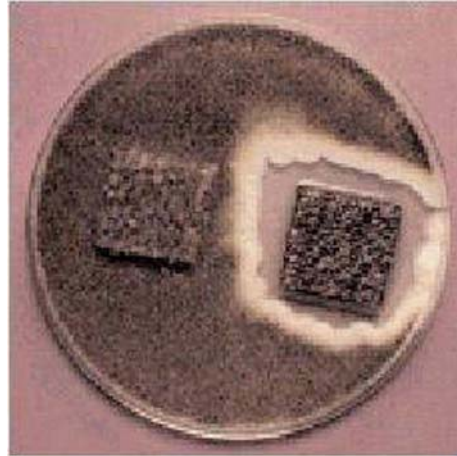

Protekt® also works with Intersept®, the patented Antimicrobial preservative that is permanently incorporated into the backing system of all products manufactured by Bentley Prince Street, without any loss of antimicrobial efficacy.

With Protekt®, you get protection against stains and soiling, enduring appearance, and cost-effective maintenance for your carpet.

Protekt® has positive environmental aspects, too. And because carpets with Protekt® don't need harsh cleaning agents, it can help keep the workplace more livable by eliminating the need for most VOC based surfactants. Protekt® also resists ozone degradation and is itself VOC-free.

Features

- Protekt® is applied to each fiber during the manufacturing process
- Protekt® does not yellow or dull carpet surface
- Protekt® is combined with the Intersept® Antimicrobial preservative

The carpet sample on the right was treated with Intersept®. Notice the zone of inhibition around the treated sample.

Benefits

- Provides consistent protection against soiling and staining while also preserving the carpet's color and pattern
- Reduces the need for frequent cleaning with harsh chemicals which could contain VOC's
- Assurance of long term performance against a host of gram negative and gram positive bacteria. Intersept® is also effective as a biocide or biostat for spores, molds, mildews and fungi
- Comes standard on all Bentley Prince Street backings at no extra charge
